## Hi There!

In today's fast-advancing digital landscape, cybersecurity has become a strategic imperative. We enable organizations to safeguard their digital environments by turning complex security challenges into opportunities for growth and innovation.

Our seasoned consultants, auditors, project leaders, and trainers bring deep industry expertise and a keen understanding of evolving business needs. We design and strengthen robust, secure, and future-proof infrastructures that empower organizations to thrive in tomorrow's marketplace.

Our core commitment is to elevate your cybersecurity and data protection maturity, ensuring you meet—and exceed—your strategic business objectives with confidence.

**Secure Your Future. Grow With Us.**

## About Company

Veilix is a next-generation cybersecurity company dedicated to protecting organizations in an era where digital risk is constantly evolving. We specialize in transforming cybersecurity from a technical function into a strategic enabler—empowering businesses to operate, innovate, and grow with confidence.

With deep expertise in threat intelligence, advanced analytics, and modern defense technologies, Veilix delivers end-to-end security services designed to safeguard digital infrastructures, critical assets, and sensitive data. Our multidisciplinary team of security consultants, penetration testers, auditors, and project specialists works closely with clients to identify vulnerabilities, strengthen resilience, and align security strategies with business objectives.

At Veilix, we believe cybersecurity is not just about protection—it is about enabling progress. Our mission is to build secure, future-ready ecosystems where organizations can unlock their full potential without disruption or compromise.

**Veilix — Securing Tomorrow, Today.**

## How We Work

We begin by deeply analyzing your environment—identifying risks, understanding your business priorities, and defining the security outcomes that matter most.

We design and deploy tailored cybersecurity controls, frameworks, and technologies to protect your critical assets with precision, efficiency, and compliance.

We provide continuous monitoring, intelligence-driven threat detection, and ongoing improvement to ensure your security posture adapts as your organization grows.

## Our Service **Company**

At Veiliux, we provide end-to-end cybersecurity services designed to secure and strengthen your digital ecosystem. Our offerings include expert security consulting, comprehensive vulnerability assessments and penetration testing, governance and compliance support, robust security architecture design, advanced threat detection and incident response, and tailored training programs. We help organizations build resilience, reduce risk, and protect their most critical assets in an increasingly complex cyber landscape.

## Our Service

## Individual

### 1. Cybersecurity Consulting

Strategic advisory services to help organizations strengthen their security posture, align with regulations, and build long-term resilience.

### 2. Vulnerability Assessment & Penetration Testing (VAPT)

Comprehensive security testing to uncover weaknesses, validate controls, and protect systems from real-world attack scenarios.

### 3. Governance, Risk & Compliance (GRC)

Holistic support to meet regulatory requirements, implement frameworks, and establish strong governance across the organization.

### 4. Security Architecture & Implementation

Design and deployment of robust, scalable, and secure infrastructures tailored to your business and technical environment.

### 5. Threat Detection & Incident Response

Proactive monitoring, rapid response, and intelligence-driven threat management to minimize impact and ensure operational continuity.

### 6. Training & Awareness Programs

Customized training to enhance employee security awareness, reduce human-related risks, and build a security-first culture.

## **BOUTIQUE SERVICES**

### **vCISO**

Avail the services of certified and experienced virtual CISO at fraction of cost.

### **GRC as a Service**

Effective governance, risk and compliance services aligned with your business needs are available under this program.

### **VAPT as a Service**

Continuous VAPT services including configuration reviews at periodic intervals and after critical changes.

# vCISO

A Chief Information Security Officer (CISO) is responsible for establishing the strategy, policies, and procedures for implementing and maintaining the security controls and processes throughout the organization. A vCISO is an outsourced experienced Security practitioner that helps the organization with establishing and managing their Information Security framework, usually remotely. Our seasoned certified vCISO can help advise, establish, implement, manage and refine your information security framework according to your business needs. Whether you are a startup that needs some advice or need to augment any processes in your existing framework, we are here to lend you a hand.

- **Cyber Security Leadership**
- **Strategy Implementation**
- **Information Security Department Setup**
  
- **Audit Preparation**
- **Ensuring Compliance**
- **Vendor Management**
- **Training**
  
- **VAPT Services**
- **Configuration Review**
- **Secure Software Development**
- **Secure DevOps**

## GRC as a Service

In current times, where there are data breaches and leaks left and right, the majority of organizations are looking to GRC services to align, update and secure their businesses. Governance, Risk and Compliance is often tough to achieve in the middle of never ending cyber security operations.

We can ease the burden of your GRC obligations by delivering high quality services at affordable rates. Some of the core services that could be added in your package of GRCaaS are:

- **Strategy management**
- **Business processes**
- **Documentation management**
- **Performance management**
  
- **Risk management**
- **Incident response & management**
- **Change management**
- **Business continuity management**
  
- **Third-party vendor management**
- **Audit management**
- **Security awareness training**

## VAPT as a Service

Whether it is a server system, an internal network, or an application, misconfigurations and poor programming practices leave a trail of vulnerabilities in the IT infrastructure that can be exploited by attackers. A VAPT service is not only to identify risks and vulnerabilities in your IT infrastructure but also to provide effective solutions. The organization or team providing the service must have the necessary credentials and experience so as to properly mitigate the vulnerabilities and not create more points of exploitation instead. Our seasoned and accredited team of experts can help fortify the cybersecurity of your organization and provide the necessary support with integrity and transparency. Our VAPT service cover:

- **Web/ Desktop Applications Testing**
- **Mobile Applications Testing**
- **Servers (Windows, Linux, Mac) Testing and configurations review**
- **Source Code Review**
- **API testing**
- **Network Devices Testing and configurations review**

**HAVE UNIQUE  
CYBERSECURITY  
REQUIREMENTS?  
WE DELIVER  
TAILORED  
SOLUTIONS BUILT  
AROUND YOUR  
BUSINESS.**

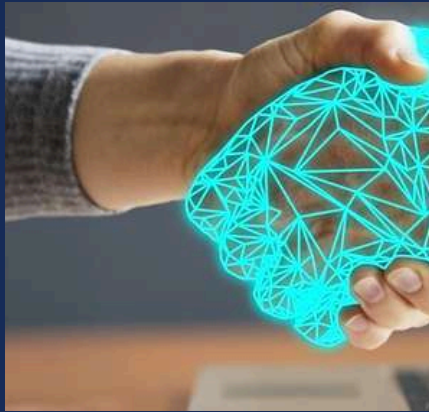

## Compliance

We deliver compliance services for international standards like ISO 27001, ISO 20000, ISO 27017, NIST, PCI DSS, SOC 2, HITRUST, FIPS and regional regulations such as GDPR, NES(A)UAE, SAMA CSF (KSA), NCA ECC (KSA), NDMO (KSA) etc

## Data Protection

A comprehensive data protection services covering data identification, classification, protection and retention throughout data lifecycle are provided. We assist organizations in understanding their data flows and data access methods.

## VAPT

We offer professional vulnerability assessment and penetration testing services for your servers, applications, databases, network devices and cloud assets. The services also include configurations review and source code review.

## Technology Consulting

Our technical experts can facilitate the implementation of solutions to protect your business. Furthermore, remediation activities required, after assessments are provided. This ensures that your controls always deliver the best value.

## Risk Assessment

We can utilize our years of experience of conducting risk assessments for IT Infrastructures. We will identify risks in your business environment in order to strengthen your risk profile and controls maturity.

## Vendor Assessment

We can assist you in evaluating and monitoring the security profile of your vendors in order to minimize risks introduced by third parties. We help organizations in developing meaningful questionnaires and vendor assessment forms.

## BCP & DR

We conduct Business Impact Assessment (BIA) in order to develop plans to ensure businesses remain resilient in tough situations. We also assist in technical evaluation of your DR plans. Our BCP services are aligned with ISO 22301.

## Incident Management

Our team of experts can develop a holistic incident management program covering policies, procedures and use cases. We also assist in enhancing the maturity of your Security Incident & Event Management (SIEM) solution.

## Cloud Security

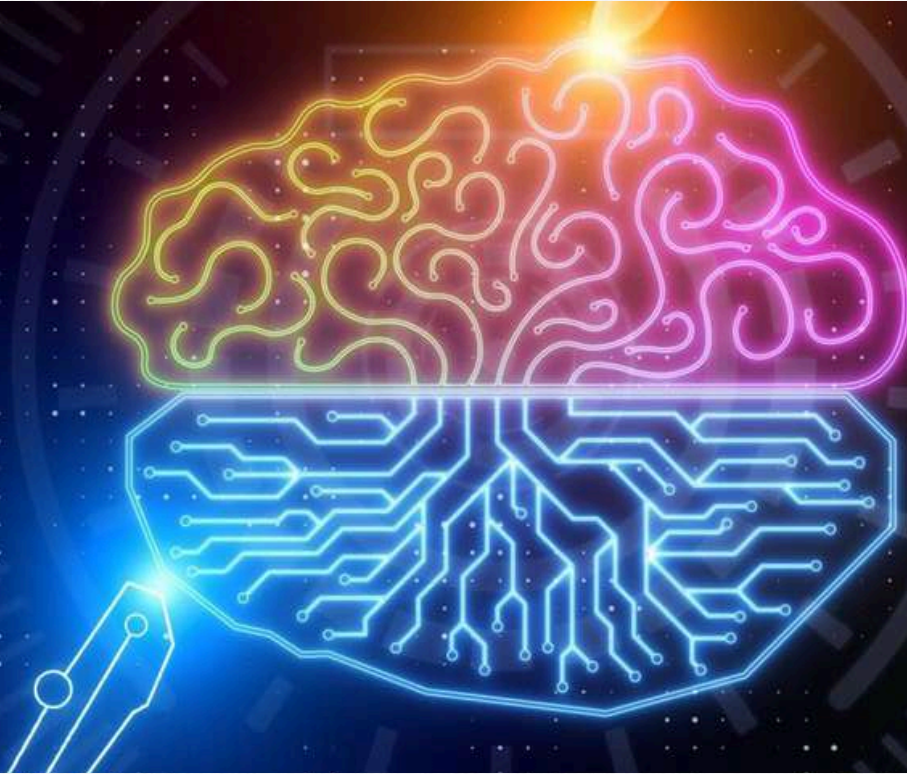

We will ensure that your cloud implementation posture is secure and resilient against emerging cyber threats. Enable trust on your cloud usage by establishing and implementing secure configurations on AWS, Azure and GCP.

## Training

We fulfill your training needs by delivering enriched awareness and technical cyber security training, customized with your business and personnel needs. We also provide certification and solution sessions.

## Solutions

Customize applications support for your needs

- **GRC Solution**
- **AI based Data Classification**
- **Data Discovery Tools**
- **Data Loss Prevention**
- **Automatic VAPT**
- **Security Awareness**
- **Project Management Tool**
- **Robotic Process**

## **Clients Distribution**

### **Based on services delivered**

We are proud to understand the business language of multiple countries and deliver best in class cyber security services across all regions.

- **Middle East**
- **Pakistan**
- **United States**
- **Singapore**
- **Japan**
- **United Kingdom**
